1.Implementation Code

(Main function)

```
#include <stdio.h>
#include<stdlib.h>
#include<string.h>
void Insert(void);
void Delete(void);
void search_id(int id,int i);
void search_name(void);
void display_sorted(int);
void display_unsorted(void);
void implement(void);
    FILE *file;
int option,id,i=0;
int counter=0,p=0;
char check[5];
char ch1[5]="yes";
char ch2[5]="YES";
    struct Details{
        int id;
        char name[30];
        int quantity; };
    struct Details books_detail[30];
    struct Details D[30];//struct for sorted data
int main(){
file=fopen("book data","r");           //start implement data from file to array of
struct
if(file==NULL){printf("file cannot be found");}
    else{
        while(!feof(file)){
            fscanf(file,"%d\t",&books_detail[counter].id);
            fscanf(file,"\t%[^_]*s",&books_detail[counter].name);
            fscanf(file,"%d\n",&books_detail[counter].quantity);
            counter++;
        }
    }
} fclose(file);

                                //end implement data from file to array of struct
do{
    printf("1:Insert a book \n");
    printf("2:Delete a book by id\n");
    printf("3:Search a book by id\n");
```

```

printf("4:Search a book by name\n");
printf("5:Display all books sorted(id,name,quantity)\n");
printf("6:Display all books unsorted(id,name,quantity)\n");
printf("enter option:");
scanf("%d",&option);
getchar();
system("cls");
switch(option){
case 1:Insert();break;
case 2:Delete();break;
case 3:printf("enter id to search:");
scanf("%d",&id);
search_id(id,i);
break;
case 4:search_name();break;
case 5:display_sorted(1);break;
case 6:display_unsorted();break;
}implement();
printf("would you like to make another operation press (yes or no):\n");
scanf("%s",check);
system("cls");
}
while(strcmp(check,ch1)==0||strcmp(check,ch2)==0);//repeat program
return 0;
}

```

2. Function Codes and their corresponding Screenshots of Output Screen

a. Create a text file

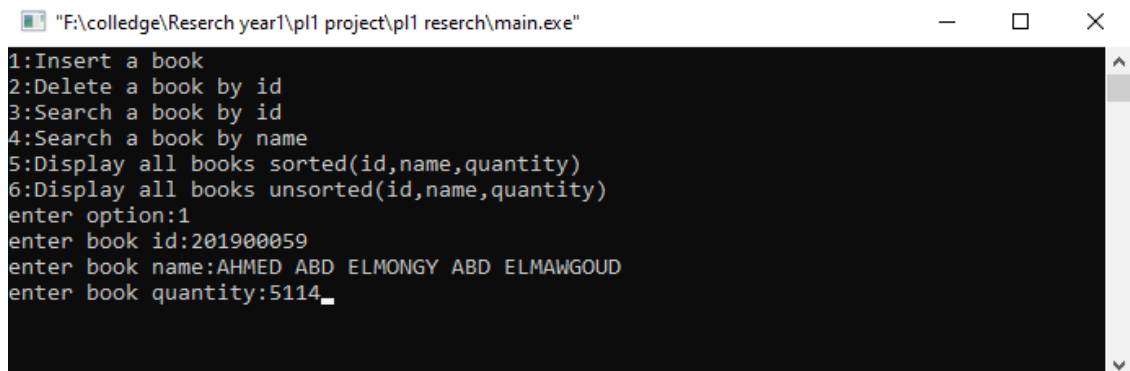

Screenshot of the text file including some books with their ids, name, and quantity)

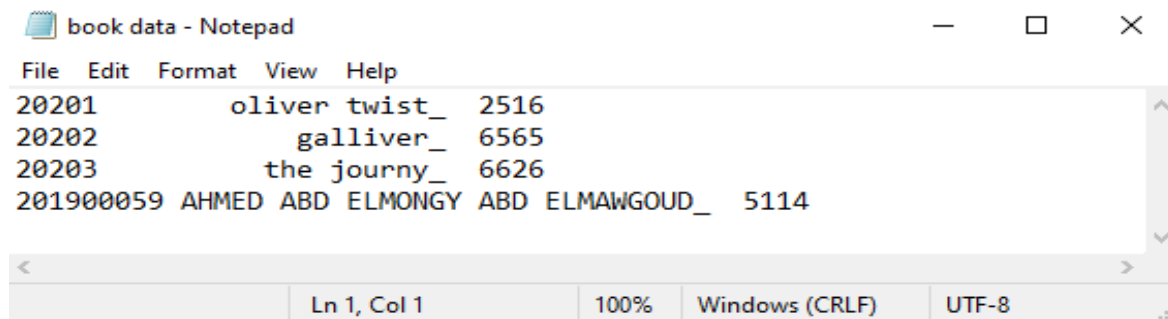

b. Insert a book

The function and the screenshot of output screen (Insert your id, complete name, any grade as a book), text file after insertion.

```
void Insert(void){  
    printf("enter book id:");  
    scanf("%d",&books_detail[counter].id);  
    getchar();  
    printf("enter book name:");  
    gets(books_detail[counter].name);  
    printf("enter book quantity:");  
    scanf("%d",&books_detail[counter].quantity);  
    counter++;  
}
```

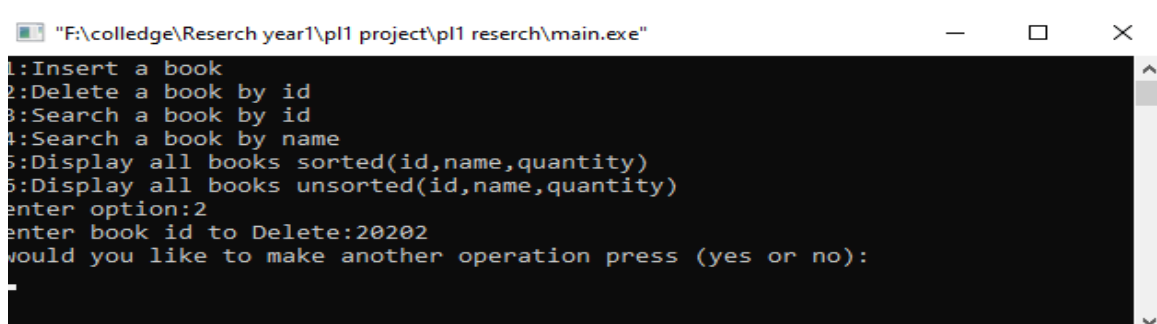

```
book data - Notepad

Ln 1, Col 1 100% Windows (CRLF) UTF-8
```

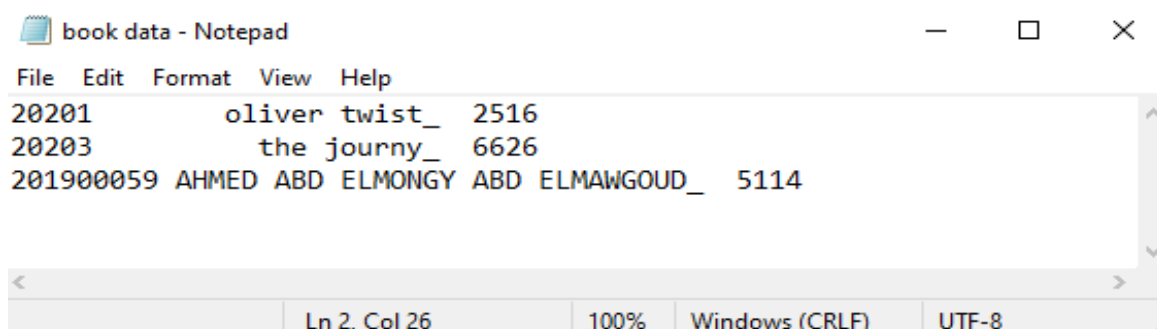

c. Delete a book by id

The function and the screenshot of output screen (choose an id to delete, but not your id), text file after deletion.

```
void Delete(void){           //start delete book function
    int j,d,q=0,delete_id;
    printf("enter book id to Delete:");
    scanf("%d",&d);
    for(q=0;q<counter;q++){
        if(books_detail[q].id==d)break;
    }if(q<counter){           //if id was found
        counter--;
        for(j=q;j<counter;j++){
            books_detail[j].id=books_detail[j+1].id;
        }
        books_detail[j].quantity=books_detail[j+1].quantity;
    }
    else{printf("ID NOT FOUND\n");}
}
```

```

```

d. Search a book by id and display its name and quantity using linear search recursively. If not exist, display “Not found”.

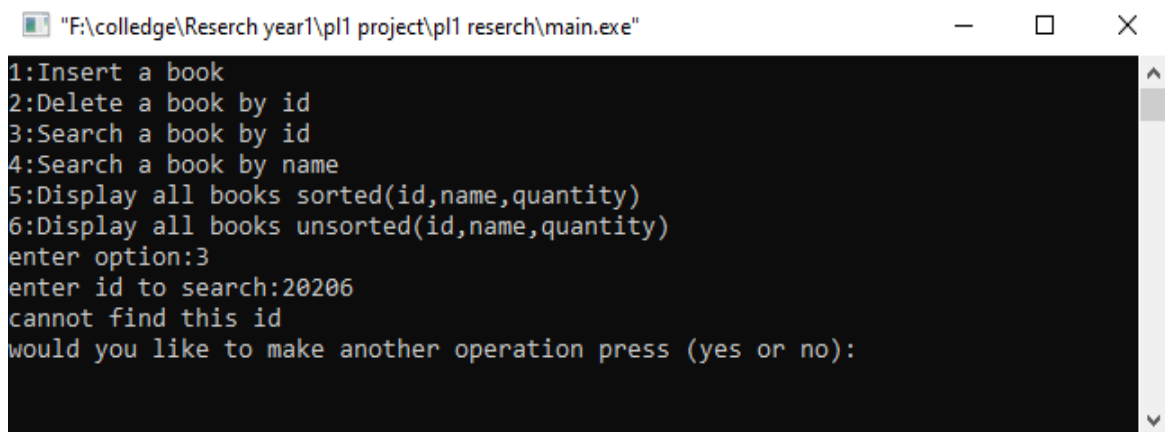

The function and the screenshot of output screen

- Choose *your id* to display.
- Choose an *id that doesn't exist* in your file.

```
void search_id(int id,int i){           function with id recursion
if(i<counter)
{   if(id==books_detail[i].id){
printf('Book ID=%d\nBook name=%s\nBook
Quantity=%d\n',books_detail[i].id,books_detail[i].name,books_detail
[i].quantity);
i++;return search_id(id,counter+1);
}
else {i++;
return search_id(id,i);}
}
else if(i==counter){printf('cannot find this id\n');}
}
```

```

3:Search a book by id
4:Search a book by name
5:Display all books sorted(id,name,quantity)
6:Display all books unsorted(id,name,quantity)
enter option:3
enter id to search:20206
cannot find this id
would you like to make another operation press (yes or no):
```

- e. Search a book by name and display its id and quantity using binary search. If not exist, display "Not found".

The function and the screenshot of output screen

- Choose an *id that exist* to display.
- Choose an *id that doesn't exist* in your file.

```
void search_name(void){
    display_sorted(0);
    int low=0,middle,high=p-1;char key[25];
    int cheak_num=0;
    printf("enter book name to search:");
    gets(key);
    while(low<=high){
        middle=(low+high)/2;
        if(strcmp(key,D[middle].name)==0){
            printf("Book ID=%d\nBook name=%s\nBook
Quantity=%d\n",D[middle].id,D[middle].name,D[middle].quantity);
            cheak_num=1;low=10;
        }
        else if(strcmp(key,D[middle].name)==1){low=middle+1;}
        else high=middle-1;
    }
    if(cheak_num==0){printf("name not found\n");}
}
```

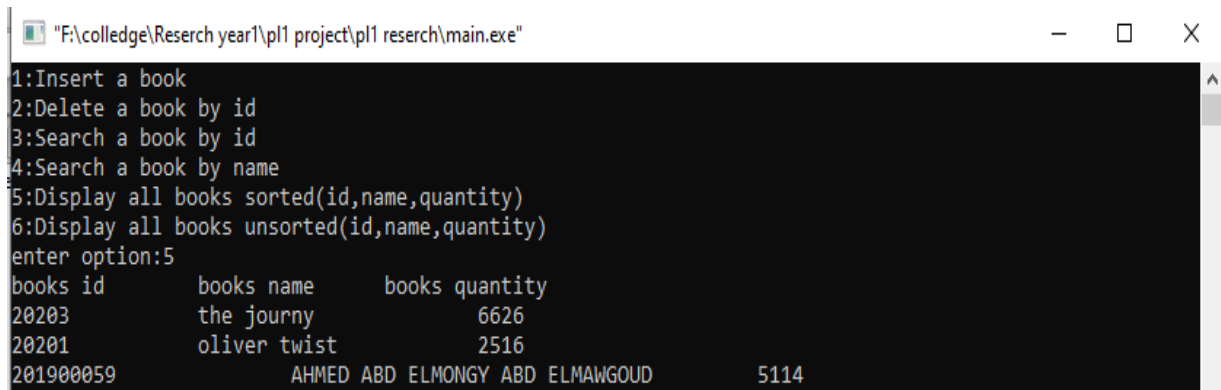

f. Display all books sorted by name, and their corresponding ids and quantity.

The function and the screenshot of output screen of all sorted books including your name.

```
void display_sorted(int mine){
    int h=0,g;char s_temp[25];

    file=fopen("book data","r");
    if(file==NULL){printf("file cannot be found");}
    else{ while(!feof(file)){
        fscanf(file,"%d",&D[p].id);
        fscanf(file,"%t%[^_]%*s",D[p].name);
        fscanf(file,"%d\n",&D[p].quantity);
        p++;
    }
} fclose(file);
for(h=1;h<p;h++){
    for(g=0;g<p;g++){
        if(strcmp(D[h].name,D[g].name)>0){
            int temp;
            temp=D[g].id;
            D[g].id=D[g+1].id;
            D[g+1].id=temp;
            temp=D[g].quantity;
            D[g].quantity=D[g+1].quantity;
            D[g+1].quantity=temp;
            strcpy(s_temp,D[g].name);
            strcpy(D[g].name,D[g+1].name);
            strcpy(D[g+1].name,s_temp);
        }
    }
}
if(mine){
    printf("books id\tbooks name\tbooks quantity\n");
    for(int i=0;i<p;i++){
        printf("%4d\t\t%s\t\t%d\n",D[i].id,D[i].name,D[i].quantity);
    }
}
```

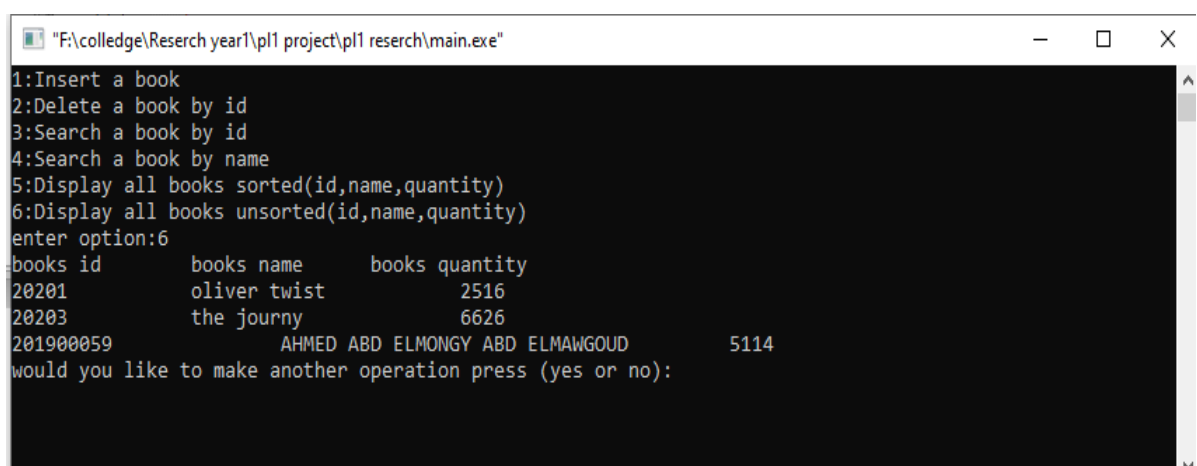

```
"F:\colledge\Reserch year1\pl1 project\pl1 reserch\main.exe"
1:Insert a book
2:Delete a book by id
3:Search a book by id
4:Search a book by name
